WORK EXPERIENCE

Rapid Labs AI - Client Facing Software Engineer

Islamabad - June 2024 – Present

- Improved client satisfaction rates by 30% by streamlining communication and setting up documentation pipelines.
- Improved project delivery rates by 20% by leading AI-based projects from conception to completion.
- Worked on NLP projects, Computer Vision projects, and set up data processing pipelines.
- Lead internal process automation within multiple domains, including data handling, marketing, and CRM.

UTest - Junior Freelance QA Tester

Remote - February 2024 – Present

- Perform Functional, Security, Accessibility, and Usability testing on diverse software.
- Improve software quality by reproducing, reporting, and providing evidence for bugs.
- Interact with testers and clients from around the globe to collaborate on testing.
- Improved feature quality for Slack, Prisma VPN, BiP, Meta Ads, Meta Business, etc.

Middle East Technical University - ML Student Assistant

Northern Cyprus - Oct 2021 – Jun 2023

- Lead lab sessions for the Machine Learning and Artificial Intelligence courses.
- Assisted Students with coursework to improve the learning experience and answer queries.
- Extensive planning and delivering information related to Python, ML, and AI algorithms such as A* search, etc.
- Helped students decide what algorithms and data structures to use for specific problems and how to design them.
- Helped prepare and deliver assignments in multiple domains such as Python programming, machine learning, etc.

Airelogics - Flutter Intern

Ontario, Canada (Remote) - Jul 2022 – Sep 2022

- Redesigned the ER diagram of a charity application project, creating room for additional features and performance increase.
- Designed and implemented the application's delivery module, significantly improving the application's outreach
- Discussed issues with team members to provide resolution and apply best practices.
- Translated customer requirements into written use cases.

Silentsol - Android Intern

Islamabad, Pakistan - Jul 2021 – Oct 2021

- Improved US-based Telehealth app's response by implementing live patient-EMT connection through Google Maps API.
- Reinstated ride-sharing application's operations by updating the used libraries and frameworks.
- Resolved system test and validation problems to provide normal program functioning.

EDUCATION

MIDDLE EAST TECHNICAL UNIVERSITY

Northern Cyprus - July 2023

Bachelor of Science - Major in Computer Engineering, Minors in General Management - CGPA: 3.40/4.0; Honors

PROJECTS

MACHINE LEARNING-BASED PRECANCEROUS CELL DETECTION ALGORITHM

- Research-Based Graduation Project - Algorithms achieved 95% test accuracy
- Python Programming, Supervised Classification Models

REAL-TIME VIDEO FACIAL RECOGNITION ALGORITHM

- Detects multiple individual faces in a video or real-time feed. Uses VGG16 & GlobalMaxPooling2D layers.
- Includes automated data collection, data processing pipelines.

MACHINE LEARNING MODEL FOR FIRE-DETECTION UAV

- We designed an ML model using transfer learning to adapt to detecting forest fires autonomously

TAXI DRIVING AGENT USING REINFORCEMENT LEARNING

- Used OpenAI Gym
- Q-learning based system
- Implemented hyperparameter tuning and parallel processing to speed up the hyperparameter tuning process

Technical Skills: RAG, Data Querying(SQL), Scripting(Python), tools(Pytorch, OpenCV, Matlab), supervised(KNN, DT, SVM) and unsupervised learning methods(Kmeans, hierarchical clustering association rules), excellent verbal and written communication skills(Urdu, English)
